

🧠 Recommended RentEase Brand Identity

Brand concept: “Rent Made Easy.”

The name **RentEase** already gives you a strong visual direction:

RENT + EASE = Easy rental process

So I would make the logo a **single abstract symbol based on the letter “R”**, rather than using a chair, tent, speaker, or other equipment.

◆ Logo Concept: “The R-Loop”

The symbol would be a **single continuous geometric shape forming an R**.

The loop represents the complete customer flow:

Browse → Cart → Checkout → Payment → Delivery → Return

And the **R** immediately connects it to **RentEase**.

Something conceptually like:

But the actual logo should be much cleaner and more polished.

The important thing is that it works as:

- 📱 App icon
- 🌐 Website logo
- 📄 Invoice/receipt
- 📦 Product packaging
- 🚚 Delivery tracking
- 💳 Checkout

-  Admin dashboard
 -  Marketing materials
-

Color Theme

Because your criteria include **online ordering, inventory, digital payment, delivery tracking, and customer support**, I recommend a color palette that feels **trustworthy and modern**, with a small event-oriented accent.

Primary: Deep Purple

#5B3FA8

Use for:

- Logo
- Navigation
- Primary buttons
- Headers
- Selected categories
- Important actions

Purple communicates a modern digital-service brand while still fitting the event industry.

Secondary: Gold

#F4B942

Use sparingly for:

- Promotions
- Discounts
- Featured products
- Special offers
- Important highlights

Gold gives the brand the **event/celebration** feeling.

Background

#F8F7F4

Use for:

- Main app background
- Product catalog
- Dashboard

Text

#252525

Use for:

- Product names
- Prices
- Descriptions
- Reports

Success

#2E9B68

For:

- Payment successful
- Order confirmed
- Delivered
- Available inventory

Warning

#E9A23B

For:

- Pending
- Low stock
- Payment pending

Error

#D9534F

For:

- Cancelled
 - Out of stock
 - Failed payment
 - Delivery problem
-

How the design should match your criteria

Your requirements actually suggest that **RentEase needs two sides:**

Customer App

This directly supports your:

- Product Catalog
- Shopping Cart
- Online Checkout
- Purchasing Capability
- Digital Payment
- Client Flow
- Delivery Tracking
- Purchase History

Admin / Management Side

Your admin dashboard should be visually different from the customer side but use the same branding.

Dashboard

RentEase	Admin 	
Dashboard		
Inventory	SALES OVERVIEW	
Products		
Orders	₱ 125,450	
Customers		
Delivery	Orders: 184	
Reports		
Issues	Customers: 96	
Payments		
Settings		

Your Inventory Module

Should show:

Product	Available Rented Maintenance		
Monoblock Chair 150	80	5	
Folding Table 40	25	2	
Tent 12	8	1	
Speaker 15	10	2	

This helps demonstrate **Inventory Management – 10%**.

Delivery Tracking

Since **Delivery Tracking is a bonus**, I would make this one of RentEase's standout features.

Use a map screen with a simple status tracker:

ORDER #RE-10245

✓ Order Confirmed

|

↓

✓ Preparing Equipment

|

↓

● Pickup

|

↓

● On the Way

|

↓

○ Delivered

Then:

Current Location

Rider/Driver

Estimated Arrival

This makes your project visibly more advanced than simply having an order system.

Checkout

The checkout design should be extremely simple because **Online Ordering is worth 20%** and **Digital Payment is 10%**.

CHECKOUT

Delivery

- ☐ Pickup
- ☒ Delivery

Delivery Address

[San Pablo, Laguna]

Rental Date

[September 25, 2026]

Items

10 × Monoblock Chair ₱500

2 × Folding Table ₱400

1 × Tent ₱800

Subtotal ₱1,700

Service Charge ₱100

Delivery Fee ₱150

TOTAL ₱1,950

Payment Method

- ☒ GCash
- ☐ Cash on Delivery

o Card

[PLACE ORDER]

This demonstrates:

Shopping Cart → Computation → Service Charge → Delivery → Payment → Order

Computation Module

This is particularly important because you specifically mentioned a **computation module for charge**.

Don't just show a total.

Make the system calculate:

Rental Subtotal

- **Service Charge**
- **Delivery Fee**
- **Additional Charges**

– **Discount**

= **Total Amount**

For example:

Rental Subtotal = ₱1,700

Service Charge = ₱100

Delivery = ₱150

Discount = ₱200

Total = ₱1,750

This makes your system demonstrate actual business logic rather than just being a catalog.

Customer Reports

Your admin can have:

Customer Report

- Total customers
- New customers
- Returning customers
- Most rented products
- Total purchases
- Total revenue
- Monthly transactions
- Cancelled orders

Business Analysis

You can also show:

Ideal Clients / Month

100–150 customers

Target Transactions / Month

150–200 transactions

Website Transactions

75% online orders

25% other/assisted orders

These can be **project targets/assumptions**, rather than claims about actual performance.

Issue Monitoring

Add an **Issue Center**:

ISSUE CENTER

#10245

Damaged Chair

Status: ● Under Review

#10238

Late Delivery

Status: ● Solving

#10231

Missing Equipment

Status: ✓ Resolved

Possible statuses:

Reported → Reviewing → In Progress → Resolved

This directly addresses:

Monitoring of Issue to Solve

And it gives you a very good customer-support component for the **10% Customer Support** criterion.

Marketing Strategy

For the **10% Marketing Strategy**, RentEase can use:

Promotions

- First Rental Discount
- Bulk Rental Discount
- Weekend Event Package
- Birthday Package
- Wedding Package
- Corporate Event Package

For example:

BIRTHDAY PACKAGE

50 Chairs + 5 Tables + Tent

Starting at ₱X,XXX

This also allows your product catalog to have **packages**, not just individual products.

Your overall system structure

I would organize the project into:

CUSTOMER

Home

- Search
- Categories
- Product Catalog
- Product Details
- Cart
- Checkout
- Payment
- Order Tracking
- Purchase History
- Customer Support

ADMIN

Dashboard

- Inventory
 - Products
 - Orders
 - Customers
 - Payments
 - Delivery Monitoring
 - Issue Monitoring
 - Customer Reports
 - Sales Reports
 - Cost-Benefit Analysis
-

Final Logo Direction

I would **not** use a logo like:

- ✗ Chair + table + tent + speaker
- ✗ Shopping cart + house + delivery truck
- ✗ Letter R surrounded by many icons

It becomes difficult to recognize.

Instead:

One symbol → Abstract R + continuous rental loop

And underneath:

RentEase

Then your tagline can be:

Rent. Book. Celebrate.

or the more functional:

Easy Rentals. Seamless Events.

Brand hierarchy

[R-LOOP]

RentEase

Easy Rentals. Seamless Events.
